We'll fill your order by first-class mail.

ECONOMIC INDICATORS OF THE FARM SECTOR: PRODUCTION AND EFFICIENCY
STATISTICS, 1987. Resources and Technology Division, Economic Research
Service, U.S. Department of Agriculture. ECIFS 7-5.

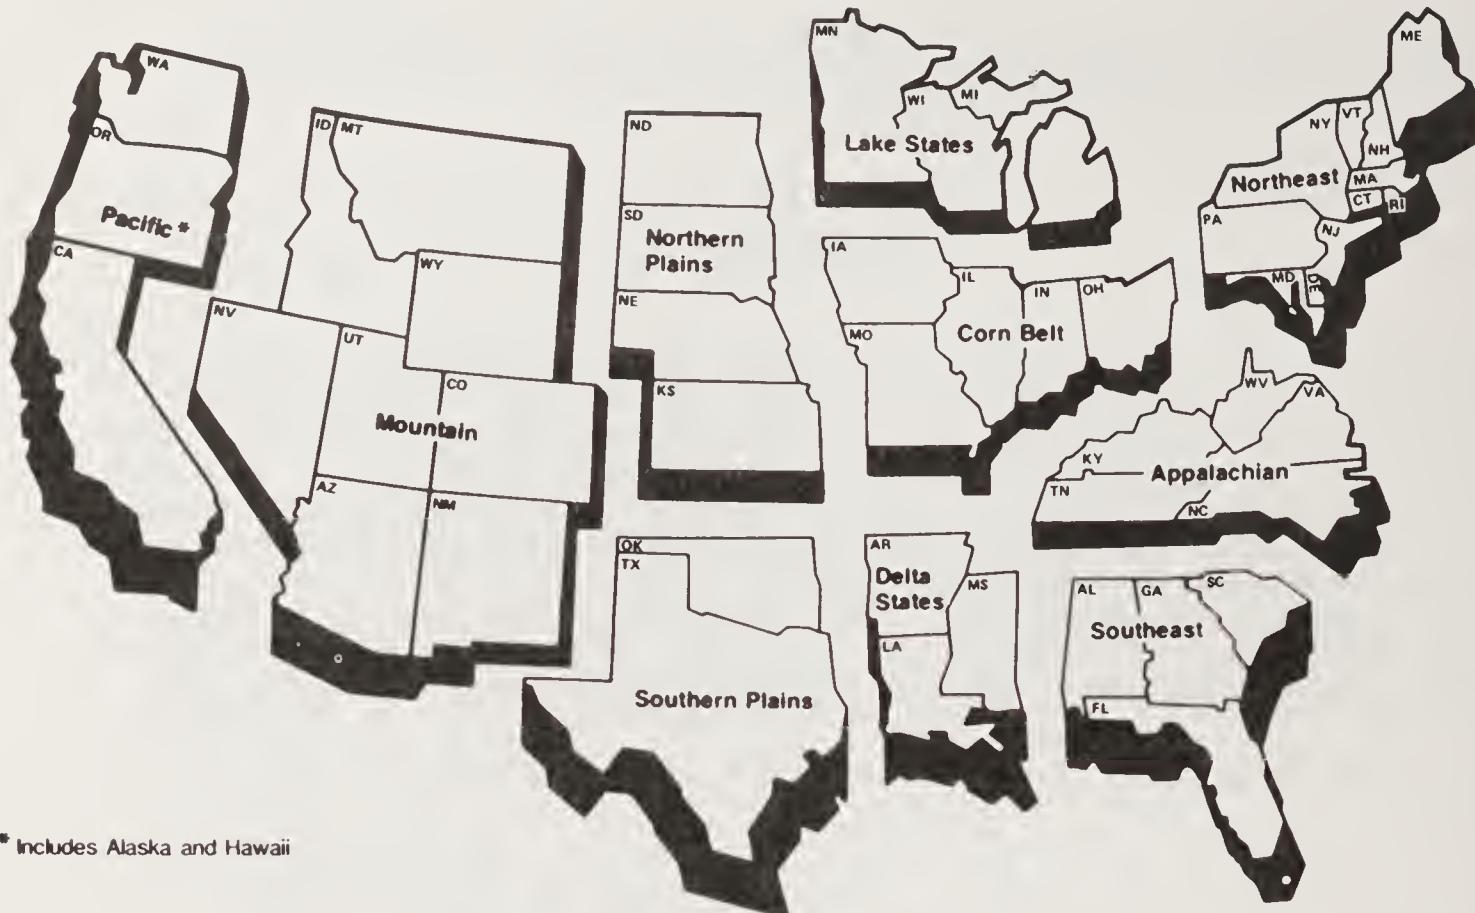

ABSTRACT

Farm output fell 1.1 percent in 1987 while input use declined 1.3 percent, resulting in an overall agricultural productivity rise of 0.2 percent. While 1 percent below 1985's record high, productivity nonetheless remained substantially above that of earlier years. A 2.2-percent rise in livestock production nearly offset a 2.6-percent drop in crop production, resulting in an insignificant drop in overall output. Use of farm labor, farm real estate, and mechanical power/machinery declined 2.9, 1.2, and 4.4 percent, respectively. Harvested crop acreage dropped 7 percent, mainly because farmers idled more than 75 million acres under Federal programs. Farm labor efficiency established a record high, increasing 2 percent in 1987.

Keywords: Farm output, farm inputs, labor, productivity.

NOTICE

Next year the Economic Research Service will introduce a new national productivity time series. Tornqvist indexes of output, input, and productivity will be presented on a national level, in addition to the Laspeyres national and regional indexes previously provided. National and regional Laspeyres indexes will continue to be published, at least temporarily. A special article in next year's report will explain the new series.

* Includes Alaska and Hawaii

Electronic Data Base Available

An electronic data base containing the statistics in this report is also available. The data base is in the form of Lotus 1-2-3 (Release 2) worksheet files on MS-DOS/PC-DOS compatible, DSDD, 5-1/4 inch diskettes.. The data base costs \$35. Charge your purchase to your VISA or MasterCard, or we can bill you. Or send a check or purchase order (made payable to ERS-NASS) to:

ERS-NASS
P.O. Box 1608
Rockville, MD 20849-1608.

Write to the above address and ask for *Production and Efficiency Statistics* (order #89026). Or use our toll-free number, 1-800-999-6779.

For further information on this data base, write James Hauver, Room 424, 1301 New York Avenue, NW, Washington, DC 20005-4788 or phone 202-786-1459.

PREFACE

This report is one of five in the Economic Indicators of the Farm Sector series. Other reports are Farm Sector Review, Costs of Production, National Financial Summary, and State Financial Summary.

This annual report includes major time series which reflect changes in farm production, production inputs, and production efficiency. We present national and, in most cases, regional time series data. The text highlights changes since the previous year or specified time period. We usually revise data only for the year preceding the year in the title, but some tables reflect changes over several years.

This publication was prepared under the general direction of James H. Hauver. Principal contributors and information sources are:

Farm output--James H. Hauver, Thelma Anderson, and Ken Krupa	(202) 786-1459
Hours of farmwork--James H. Hauver	786-1459
Farm inputs--Rachel B. Evans and James H. Hauver	786-1459
Cropland used for crops--Art Daugherty	786-1422
Farm machinery--Leroy Hansen	786-1456
Fertilizer--Harold Taylor	786-1456
Managing editor--Jim Carlin	786-1512
Secretarial support--Ruth F. Spivey	786-1459

Economic Indicators of the Farm Sector Production and Efficiency Statistics, 1987

BACKGROUND

Farm production and input use declined slightly in 1987, leaving overall agricultural productivity virtually unchanged from 1986 levels. However, labor efficiency increased 2 percent, reaching a record high. Farm output fell about 1.1 percent from 1986 levels. A 2.2-percent rise in livestock production nearly offset a 2.6-percent drop in crop production, resulting in a small decline in overall output. Farm output is the combination of total livestock and total crop production indexes adjusted to exclude goods produced on farms for use in further agricultural production. Because of these adjustments, the farm output index may be outside the range of the index number of either of its components.

Total 1987 input use declined 1.3 percent and production fell 1.1 percent, so productivity did not change significantly. While 1 percent lower than 1985's record level, productivity remained substantially higher than levels achieved before 1985.

While overall crop production declined, crop production per acre achieved a historic high, 5.2 percent above 1986 levels. Production of feed grains fell 14.7 percent, production of oil crops fell 3.7 percent, and production of hay and forage fell 3.4 percent. But, cotton output increased sharply by 50.8 percent. Production climbed for fruits and nuts (8.9 percent), sugar crops (5.6 percent), and vegetables (3.8 percent). Food grain output was essentially unchanged, dropping 0.2 percent.

Livestock production rose 2.2 percent, led by an 8.1-percent increase in poultry production. Meat animal production rose 1.5 percent. Dairy output fell 0.6 percent.

HIGHLIGHTS

Farm output fell 1.1 percent. A 2.2-percent rise in livestock production did not entirely offset a 2.6-percent drop in crop production (table 1).

Farm output rose in the five western and southern regions and fell in the five eastern regions. Production increased in the Delta States (7.8 percent), Southern Plains (6.7 percent), Pacific (5.4 percent), Southeast (3.8 percent), and Mountain regions (3.6 percent). The Corn Belt, Northern Plains, Northeast, Lake States, and Appalachia reported output declines of 7.2, 4.0, 3.2, 2.8, and 0.3 percent. This geographical pattern reflected reductions in feed crop production and increases in cotton, sugar crops, fruits and nuts, and broiler output (tables 2-11).

Production of feed grains, oil crops, and hay and forage fell, while the output of cotton, fruits and nuts, sugar crops, vegetables, and tobacco rose. Food grain output did not change. Five eastern regions experienced declines in crop production, including the Corn Belt (10.4 percent), Northern Plains (6.8 percent), Northeast (5.4 percent), Lake States (5.4

percent), and Appalachia (2.1 percent). However, five western and southern regions increased output. Crop production rose in the Southern Plains (10.6 percent), Delta States (8.1 percent), Pacific (5.7 percent), Mountain (5.6 percent), and Southeast regions (3.9 percent).

Production of feed grains, which includes corn, sorghum, oats, and barley, fell to 215 million metric tons, down 14.7 percent from the 1986 level. Corn production declined 14 percent to about 7 billion bushels, but corn yield rose to a record high 119.4 bushels per acre. Sorghum grain production totaled 741 million bushels, a 21-percent decline. Sorghum yields, however, rose to a record 69.9 bushels per acre. Oats production fell 3 percent to 374 million bushels, the smallest crop since 1876. Yield averaged 54 bushels per acre, down 2.3 bushels from 1986. Barley output declined 14 percent to 527 million bushels, but average yield per acre rose to 52.6 bushels, a 1.8-bushel upturn.

Production of hay and forage declined 3.4 percent. The amount of all hay produced fell to 149 million tons, 4 percent below the record high of 1986. Oil crops output fell 3.7 percent.

Cotton's 50.8-percent rise pushed production to 14.7 million bales. Cotton yield per acre also reached a record high of 703 bales, 27.4 percent above 1986's reported yield. Production climbed for fruits and nuts (8.9 percent) and vegetables (3.8 percent), reaching record levels. Tobacco output rose 2.5 percent.

Production of food grains, which include wheat, rye, and rice, amounted to 63.6 million metric tons in 1987, essentially unchanged from the year before.

Livestock production's 2.2-percent increase stemmed from rises in poultry output of 8.1 percent and meat animals output of 1.5 percent. Dairy output was unchanged. Hog and sheep production rose 5.2 and 2.8 percent, while cattle output fell marginally. Egg, broiler, chicken, and turkey production increased 1.6, 9.5, 1.8, and 17.8 percent, respectively. Livestock production rose in the Delta States (6.4 percent), Northern Plains (4.5 percent), Pacific (3.6 percent), Corn Belt (3.1 percent), Lake States (2.4 percent), Southeast (2.3 percent), and Appalachia (1.4 percent). Livestock production declined in the Mountain region (1.1 percent), the Northeast (0.6 percent), and Southern Plains (0.3 percent).

Harvested crop acreage dropped 7 percent to 302 million acres (table 12), a 23-million-acre decline, mainly because farmers idled more than 75 million acres under Federal programs. The 1987 harvested acreage was the lowest since 1972. Harvested acreage had peaked at 366 million acres in 1981. Farmers harvested fewer acres of most major crops in 1987. Feed grain acreage was down 15.2 million acres, food grains 4.8 million acres, and soybeans 1.9 million acres. Harvested cotton, however, increased by 1.6 million acres.

Crops exported represented an acreage equivalent of 107 million acres, up 11 percent from 1986's 96 million acres (table 12). This expansion, however, remained below the 1980 high of 137 million acres. Food grains accounted

for 38 percent of the export acreage equivalent, while oil crops made up 28 percent, feed grains 20 percent, cotton 4 percent, and other crops 10 percent.

Cropland used for crops totaled 331 million acres, down 7 percent (table 13). Cropland harvested reached 293 million acres, while crop failure affected about 6 million acres. Summer fallow accounted for 32 million acres.

Acreages of cropland used for crops were lower in all regions compared with the year before (tables 14-23). The largest acreage declines occurred in the Corn Belt (7.8 million), Northern Plains (4.1 million), Southern Plains (3.9 million), and Lake States (3.5 million). Indexes of cropland used for crops fell in all regions (table 24). The U.S. index dropped from 94 to 87 (1977=100).

Crop production per acre is the index of crop production expressed as a percentage of the index of cropland used for crops and indicates relative annual yields of all crops combined (table 25). These yields per acre rose 5.2 percent, attaining a historic high (122). The index of crop production per acre increased in seven regions (Pacific, Southeast, Mountain, Delta States, Southern Plains, Lake States, and Appalachia), and fell in three regions (Northern Plains, Corn Belt, and Northeast). Yields rose for cotton (27.4 percent), wheat (9.3 percent), barley (3.5 percent), sorghum (3.2 percent), and tobacco (1.9 percent), while yields fell for oats (4.1 percent) and rice (13 percent). Corn yield increased slightly from 1986 levels. Growers attained record yields per acre for corn (119.4 bushels), sorghum (69.9 bushels), and cotton (703 bales).

Animal units of breeding livestock declined 2 percent in 1987, but livestock production per breeding unit reached a record high (127), 4.3 percent above 1986 levels (table 26). The number of breeding milk cows and breeding sows fell 6 and 1.6 percent. Inventories of beef cows, breeding ewes, and breeding hens and pullets increased marginally, remaining essentially unchanged from 1986. Inventories of goats clipped did not change at all. Inventories of breeding turkey hens, no longer reported, are estimated to have increased moderately, based on past trends.

Fertilizer use declined 2 percent to 19.2 million nutrient tons (table 27). Of the primary nutrients, nitrogen use fell less than 1 percent to 10.3 million tons (table 28). Phosphate and potash use declined 4 percent each to 4 and 4.8 million tons (tables 29 and 30). The decline in fertilizer use resulted from fewer acres in production. Fertilizer use per acre remained about the same as year-earlier levels.

Fertilizer applications declined in some regions of the country and increased in others. Declines were greatest in the Delta States and Corn Belt, while applications increased in the Mountain and Southern Plains regions. Nitrogen use changes ranged from a 12-percent increase in the Mountain region to an 8-percent decline in the Delta States. Corn Belt farmers reduced nitrogen use by about 7 percent, while Southern Plains farmers increased use by 6 percent. Phosphate use changes ranged from an

8-percent increase in the Mountain region to a 20-percent drop in the Delta States. Corn Belt farmers reduced phosphate use by 9 percent. Potash use ranged from a 10-percent increase in the Mountain region to 7-percent reductions in the Northeast, Corn Belt, and Southern Plains.

Fertilizer application rates on corn, cotton, wheat, and soybeans varied by crop. Nitrogen and phosphate application rates of 132 and 61 pounds per acre on corn remained about the same, while the potash application rate increased 6 percent to 85 pounds per acre. Average nitrogen application rates of 82, 20, and 62 pounds per acre for cotton, soybeans, and wheat represented increases of 7, 33, and 3 percent. The phosphate application rate of 44 pounds per acre for cotton remained the same, and application rates of 47 and 35 pounds per acre for soybeans and wheat meant increases of 9 and 3 percent. Potash application rates of 45 and 43 pounds per acre for cotton and wheat amounted to declines of 10 and 2 percent. The potash application rate for soybeans rose 6 percent to 75 pounds per acre.

Farm machinery expenditures increased in 1987, ending 7 years of decline. Expenditures for tractors rose \$340 million to \$1.85 billion, and purchase of other farm machinery rose \$380 million to \$3.09 billion. Farm machinery expenditures in 1988 are expected to have held steady or possibly to have risen above 1987 levels despite the drought.

Improved farm machinery sales stemmed from improved financial conditions for farmers. Net farm cash income reached a record \$56 billion in 1987 and may have reached the same level in 1988. Land values in February 1988 showed a 3-percent gain over the previous year and may increase more by 1989. Total farm debt was at its lowest level since 1979.

Inventory estimates for 1986 and later will not be revised or updated, pending the release of data from the 1987 Census of Agriculture. Table 31, which carries estimated inventory data for 1986, repeats the data published last year. Total onfarm inventory for January 1, 1986, fell by less than 1 percent as tractors and selected harvesting and haying equipment declined from year-earlier levels. Motor truck inventory remained unchanged from 1985. The average size of tractors held constant at roughly 67 horsepower per unit.

Total hours of labor used for farmwork were 5.4 billion, down 3 percent from 1986 (tables 32 and 33), a statistically insignificant decline. Labor use fell in five of the seven sales classes of farms. Farms showed declines in hours of farmwork in the following sales classes: \$500,000 and over (11.4 percent), \$100,000-\$249,999 (5.3 percent), \$40,000-\$99,999 (2.7 percent), \$10,000-\$19,999 (3.2 percent), and less than \$10,000 (12.2 percent). Only the last amount was statistically significant. These five classes accounted for 78 percent of total labor use in 1987.

However, farms with sales of \$250,000-\$499,999 reported a statistically significant 32.6-percent increase in labor use. Labor use increased a statistically insignificant 1.5 percent on farms in the \$20,000-\$39,999 sales class.

A statistically significant increase in farm labor occurred in cotton (86.5 percent), reflecting much greater cotton output in 1987. Labor use also rose on other livestock (41.1 percent) and nursery/greenhouse operations (19.9 percent), though not at statistically significant levels. These three farm types accounted for 12.7 percent of total labor use. Other farm types reported statistically insignificant declines in farm labor: vegetable/fruit/nut (27.4 percent), tobacco (14.1 percent), poultry (11.4 percent), dairy (6.9 percent), cash grains (4.5 percent), other crops (2.2 percent), and beef/hog/sheep (0.9 percent).

Labor used on the farm declined in five regions and rose in five, though not significantly. Farm labor fell in the Northeast (15.4 percent), Pacific (11 percent), Southern Plains (7.7 percent), Northern Plains (5.4 percent), and Corn Belt (5.1 percent). Farm labor increases were reported in the Mountain region (17.5 percent), Delta States (6.4 percent), Southeast (4.3 percent), Appalachia (2.3 percent), and Lake States (1.8 percent). The tabulation on the next page shows more detailed labor use data.

Total farm labor productivity reached a record high in 1987 (142), 2.2 percent above last year's level, but substantial variation existed across regions (table 34). Production per hour rose in five regions and declined in five. Substantial increases in labor productivity took place in the Pacific (18.1 percent), Southern Plains (15.2 percent), and Northeast (14.8 percent). Minor increases occurred in the Northern Plains (0.6 percent) and Delta States (0.6 percent). The Mountain region reported a sharp drop in labor productivity (11.4 percent). Declines in labor productivity occurred in the Lake States (4.2 percent), Appalachia (2.4 percent), Corn Belt (1.8), and Southeast (0.4 percent).

One U.S. farmworker produced enough farm products for 96 persons in 1987, compared with 92.7 persons in 1986, a 3.6-percent increase (table 35). One farmworker produced enough for 58 persons in 1975 and 37 in 1965. However, to suggest that the labor of one farmworker (farmworkers include farm operators, hired workers, and unpaid family workers) produced the food, fiber, and tobacco consumed by 96 people would be deceptive. Farmers and farmworkers have become more specialized over the years. Many jobs and functions have moved from farms to nonfarm sites. For instance, feed preparation and custom services have shifted to nonfarm enterprises. Because of these changes, many nonfarmworkers perform functions formerly done by farmworkers. This series does not quantify off-farm contributions. Onsite employment in farm production has declined. For every worker on farms, at least five nonfarmworkers provide resources and services in producing, processing, transporting, wholesaling, and retailing farm products.

Total quantity of farm inputs used in 1987 declined 1.3 percent (table 36): use of farm labor dropped 2.9 percent, use of farm real estate was down 1.2 percent, and use of mechanical power/machinery declined 4.4 percent. These three input groups constituted 68.6 percent of total inputs used in

Changes in labor hours, by sales class, farm type, and region

Mountain	355	417	1.58
Pacific	645	574	- .89

agriculture in 1987. Taxes and interest fell 1.2 percent. However, use of agricultural chemicals rose 0.8 percent; use of feed, seed, and livestock purchases rose 4.8 percent; and use of miscellaneous inputs rose 8.6 percent.

Use of purchased inputs, which made up 51.7 percent of all farm inputs, remained essentially unchanged in 1987, rising 0.2 percent. Farmers used

less hired labor and machinery repairs and parts, but more telephone, veterinary services, and other miscellaneous inputs. Use of nonpurchased inputs, 48.3 percent of the total in 1987, fell 2.8 percent when operator labor and capital consumption declined.

Total farm input use fell in seven regions (tables 37-46): Northeast (6.0 percent), Corn Belt (2.3 percent), Pacific (2.2 percent), Appalachia (1.2 percent), Southern Plains (1.0 percent), Lake States (0.9 percent), and Northern Plains (0.7 percent). Input use rose, however, in the Mountain region (2.1 percent), Delta States (1.4 percent), and Southeast (0.4 percent).

Farm output per unit of input rose 0.2 percent in 1987 to just 1 percent below the record level achieved in 1985 (tables 47 and 48). Productivity of farm inputs rose in seven regions and fell in three. Multifactor productivity increased in the Pacific (7.8 percent), Southern Plains (7.7 percent), Delta States (6.3 percent), Southeast (3.3 percent), Northeast (3.0 percent), Mountain (1.5 percent), and Appalachia regions (0.9 percent). Productivity attained record levels in the Pacific, Delta States, and Mountain regions. Productivity declined in three regions: the Corn Belt (5.0 percent), Northern Plains (3.4 percent), and Lake States (1.6 percent).

The severe drought of 1988 substantially reduced farm output and observed productivity, but input use was probably not greatly affected. Most inputs had been committed before the drought became severe.

Preliminary information indicates that total farm output fell 11.2 percent in 1988. This information shows that crop production fell 17.7 percent, but was offset somewhat by a 2.6-percent increase in livestock production: livestock products up 3 percent, meat animals up 2 percent, dairy and poultry products up 2.8 percent. The rise in meat animal products probably resulted from the drought, because farmers reduced their herds due to the lack of feed and water.

1/ The index number of farm output in some instances may be outside the range of the index number of all crops and the index number of all livestock production. 2/ Horses and mules excluded. 3/ Includes clipped wool, mohair, and for 1950 to date, honey and beeswax. These items are not included in the separate groups of livestock and products shown. 4/ Cattle and calves, sheep and lambs, and hogs. 5/ Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. 6/ Chickens and eggs, commercial broilers and turkeys. 7/ Includes hayseeds, pasture seeds, and cover-crop seeds, and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens were excluded after 1964. 8/ Corn for grain, oats, barley, and sorghum grain. 9/ All hay, sorghum forage, corn silage, and for 1950 to date, sorghum silage. 10/ All wheat, rye, and rice. Buckwheat was excluded after 1964. 11/ Potatoes, sweetpotatoes, dry edible beans, dry field peas, truck crops for processing, and truck crops for fresh market. 12/ Fruits, berries, and tree nuts. Citrus production is on year of harvest, 1960 to date. Earlier years on year of bloom. 13/ Sugar beets, sugarcane for sugar and seed, sugarcane syrup, and maple syrup. 14/ Soybeans, peanuts for nuts, cottonseed, flaxseed, and, for 1950 to 1964, tungnuts and peanuts hogged. 15/ Preliminary.

1/ Horses and mules excluded. 2/ Includes clipped wool, honey, and beeswax. These items are not included in the separate groups of livestock and livestock products shown. 3/ Cattle and calves, sheep and lambs, and hogs. 4/ Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. 5/ Chicken eggs, commercial broilers, chickens, and turkeys. 6/ Includes hayseeds, pasture seeds, and cover-crop seeds, and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens excluded after 1964. 7/ Corn for grain, oats, and barley. 8/ All hay and corn silage. 9/ All wheat and rye. Buckwheat was excluded after 1964. 10/ Potatoes, dry edible beans, dry field peas, truck crops for processing, and truck crops for fresh market. 11/ Fruits, berries, and tree nuts. 12/ Sugar beets and maple syrup. 13/ Soybeans and flaxseed. 14/ Preliminary.

1/ Horses and mules excluded. 2/ Includes clipped wool, honey, and beeswax. These items are not included in the separate groups of livestock and livestock products shown. 3/ Cattle and calves, sheep and lambs, and hogs. 4/ Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. 5/ Chicken eggs, commercial broilers, chickens, and turkeys. 6/ Includes hayseeds, pasture seeds, and cover-crop seeds, and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens excluded after 1964. 7/ Corn for grain, oats, barley, and sorghum grain. 8/ All hay, sorghum forage, sorghum silage, and corn silage. 9/ All wheat and rye. Buckwheat excluded after 1964. 10/ Potatoes, sweet-sorghum forage, sorghum silage, and corn silage. 11/ Fruits, berries, and tree nuts. 12/ Sorghum syrup potatoes, truck crops for processing, and truck crops for fresh market. 13/ Soybeans, peanuts for nuts, and cottonseed. Peanuts hogged were excluded after 1964. 14/ Preliminary.

1/ Horses and mules excluded. 2/ Includes clipped wool, mohair, honey, and beeswax. These items are not included in the separate groups of livestock and livestock products shown. 3/ Cattle and calves, sheep and lambs, and hogs. 4/ Butter, butterfat, wholesale milk, retail milk, and milk consumed on farms. 5/ Chicken eggs, commercial broilers, chickens, and turkeys. 6/ Includes hayseeds, pasture seeds, and cover-crop seeds, and some miscellaneous crop production not included in separate groups of crops shown. Farm gardens excluded after 1964. 7/ Corn for grain, oats, barley, and sorghum grain. 8/ All hay, sorghum forage, sorghum silage, and corn silage. 9/ All wheat, rye, and rice. 10/ Potatoes, sweetpotatoes, truck crops for processing, and truck crops for fresh market. 11/ Fruits, berries, and tree nuts. Citrus production is on year of harvest 1960 to date. Earlier years on year of bloom. 12/ Because of the small quantities produced, the index is not shown separately but is included in total crop production. 13/ Soybeans, peanuts for nuts, cottonseed, and flaxseed. Peanuts hogged were excluded after 1964. 14/ Preliminary.

N/A=not available.

1/ Calendar year for 1947-49. Fertilizer year ending June 30 for 1950-87. 2/ Includes 50 States and Puerto Rico.

3/ Includes 48 States only. 4/ To convert P_2O_5 to P multiply P_2O_5 by 0.43642. 5/ To convert K_2O to K multiply K_2O by 0.83016. 6/ Includes material for nonfarm use. 7/ Preliminary.

Sources: Primary plant nutrients: Agricultural Research Service, 1947-49; National Agricultural Statistics Service and its predecessor agencies, 1950-85, Tennessee Valley Authority, 1986-87. Liming materials: National Stone Association.

1/ Data as of January 1. Data based on Census of Agriculture reports alone. Interpolations between census years have been discontinued. 2/ Includes wheel and crawler type tractors. 3/ Data for 1975 and after are for self-propelled combines only.

4/ Includes corn pickers and picker shellers. 5/ Does not include balers, producing bales weighing more than 200 pounds.

6/ Data for 1976 and after do not include flail-type forage harvesters. 7/ U.S. totals for 1978 are not directly comparable with totals for 1974 or earlier census years, because they include State-level data from farm operators represented on the census mailing list, plus estimates from the direct enumeration sample for farms not represented on the mailing list.

As a result, figures for nearly all categories are somewhat higher than they would be using the earlier base. The 1974 U.S. data include only operations represented on the mailing list.

1/ Data computed from unrounded index numbers 2/ Preliminary.

Get these timely reports from USDA's Economic Research Service

These periodicals bring you the latest information on food, the farm, and rural America to help you keep your expertise up-to-date. Order these periodicals today to get the latest facts, figures, trends, and issues from ERS.

Agricultural Outlook. Presents USDA's farm income and food price forecasts. Emphasizes the short-term outlook, but also presents long-term analyses of issues ranging from international trade to U.S. land use and availability. 11 issues annually. 1 year, \$22; 2 years, \$43; 3 years, \$63.

Farmland. Concise, fact-filled articles focus on economic conditions facing farmers, how the agricultural environment is changing, and the causes and consequences of those changes for farm and rural people. 11 issues annually. 1 year, \$11; 2 years, \$21; 3 years, \$30.

National Food Review. Offers the latest developments in food prices, product safety, nutrition programs, consumption patterns, and marketing. 4 issues annually. 1 year, \$10; 2 years, \$19; 3 years, \$27.

Economic Indicators of the Farm Sector. Updates economic trends in U.S. agriculture. Each issue explores a different aspect of income and expenses: national and State financial summaries, production and efficiency statistics, costs of production, and an annual overview. 5 issues annually. 1 year, \$12; 2 years, \$23; 3 years, \$33.

Rural Development Perspectives. Crisp, nontechnical articles on the results of new rural research and what those results mean. 3 issues annually. 1 year, \$9; 2 years, \$17; 3 years, \$24.

The Journal of Agricultural Economics Research. Technical research in agricultural economics, including econometric models and statistics focusing on methods employed and results of USDA economic research. 4 issues annually. 1 year, \$7; 2 years, \$13; 3 years, \$18.

Foreign Agricultural Trade of the United States. Updates the quantity and value of U.S. farm exports and imports, plus price trends. 8 issues annually. 1 year, \$20; 2 years, \$39; 3 years, \$57.

Situation and Outlook Reports. These reports provide timely analyses and forecasts of all major agricultural commodities and related topics such as finance, farm inputs, land values, and world and regional developments. Each *Situation and Outlook* title costs 1 year, \$10; 2 years, \$19; 3 years, \$27. Titles include:

<i>Agricultural Exports</i>	<i>Cotton and Wool</i>	<i>Oil Crops</i>	<i>Vegetables and Specialties</i>
<i>Agricultural Income and Finance</i>	<i>Dairy</i>	<i>Rice</i>	<i>Wheat</i>
<i>Agricultural Resources</i>	<i>Feed</i>	<i>Sugar and Sweeteners</i>	<i>World Agriculture</i>
<i>Aquaculture</i>	<i>Fruit and Tree Nuts</i>	<i>Tobacco</i>	<i>World Agriculture Regionals</i>

Also available: *Livestock and Poultry*: 1 year, \$15; 2 years, \$29; 3 years, \$42.

Add 25 percent for shipments to foreign addresses (includes Canada). Sorry, no refunds.
